Duong Anh Kiet

Frontend Developer (ReactJS, NextJS, TypeScript)

duonganhkiet2306@gmail.com | +84 855 395 492 | Ho Chi Minh City

Overview

Frontend developer with 2+ years building production web applications with React, TypeScript and Next.js (SSR), including SEO-optimized websites, CMS and admin systems managing 1,000+ merchant offers. Deliver features end-to-end, from implementing Figma designs to production: API integration, state and data management, and handling edge cases in asynchronous, error-prone flows. Experienced with Tailwind CSS, Vitest, and AI coding agents. Collaborate closely with designers, backend engineers and product teams to deliver user-focused products from requirements to release.

Education

Bachelor of Information Technology, Royal Melbourne Institute of Technology (RMIT) **2021 – 2024**

Skills

Core Web: React.js, TypeScript, Next.js (App Router, SSR), JavaScript (ES6+), HTML5, CSS3

UI and Styling: Tailwind CSS, Ant Design, Bootstrap, Responsive Design

State and Data: Redux Toolkit, RTK Query, Zustand, Zod, Yup

Backend and Cloud: RESTful APIs, PostgreSQL, MongoDB, Docker, AWS

Testing and Quality: Vitest, Biome, Husky, SonarQube, Git, GitHub, CI/CD

Languages: Vietnamese, English

Experience

Frontend Developer, Novaland – Ho Chi Minh City **Apr 2026 – June 2026**

- Built an internal KPI management CMS with Next.js 15 and React 19, cascading company-level KPIs down to team and individual goals
- Translated Figma UI/UX designs into reusable, responsive interfaces across desktop and mobile breakpoints; collaborated with designers to refine layouts, component states, and user flows before implementation
- Structured the application into feature-based presentation, business logic, data access, and core layers for scalability and maintainability across modules
- Implemented Redux Toolkit and RTK Query with tag-based cache invalidation and optimistic updates to keep KPI data current in real time
- Validated complex KPI entry forms with Zod schemas for type-safe input and consistent error handling
- Wrote unit tests with Vitest for utility functions and components
- Delivered a bilingual (Vietnamese and English) interface with next-intl, Ant Design, and TypeScript, and enforced code quality with Biome and Husky pre-commit hooks in a collaborative Git workflow

  Technologies: *Next.js 15, React 19, TypeScript, Redux Toolkit, Zod, Ant Design,* Vitest, *next-intl, Biome, Husky*

Frontend and Mobile Developer, heu! – Remote (UAE) **July 2025 – Mar 2026**

- Developed a React Native iOS and Android app for a UAE discount aggregator, with map-based offer discovery, card and membership filtering, and favorites, published to the App Store and Google Play
- Built a React.js back-office admin system with role-based access control, enabling content managers to create, update, and categorize 1,000+ merchant offers and card-linked deals
- Built an SEO-optimized Next.js marketing website with SSR, handling metadata, dynamic routes and server-side data fetching, improving organic search discoverability for users across Dubai and Abu Dhabi
- Integrated Google Places API and Maps SDK for geolocation-based offer discovery, and Amplitude and AppsFlyer for user behavior tracking and attribution analytics
- Collaborated with DevOps on deployment and database provisioning on AWS (EC2, RDS, PostgreSQL), and with product and design teams to turn requirements into accessible interfaces

Technologies: *React Native, React.js, Next.js, Google Maps SDK, Amplitude, AppsFlyer, AWS*

Frontend Developer, Toncash – Ho Chi Minh City **Mar 2025 – June 2025**

- Built a Telegram Mini App with React.js and TypeScript, unifying traditional and Web3-based offer discovery in one affiliate marketplace for a fast-growing user base
- Developed a React.js CMS that streamlined affiliate campaign management, enabling non-technical admins to create, publish, and monitor campaigns without developer intervention.
- Developed a TON blockchain transaction tracking module that verifies user deal interactions in real time and adds transparency to affiliate payouts
- Delivered a responsive Ant Design and Tailwind CSS interface with designers and backend engineers

Technologies: *React.js, TypeScript, Ant Design, Tailwind CSS, TON blockchain, Telegram Mini Apps*

Frontend Developer, Nextway Technology – Ho Chi Minh City **Nov 2024 – Feb 2025**

- Built a Zalo Mini App with React.js and TypeScript for healthcare professionals and patients, supporting seminar browsing, content feeds, and an engagement-based rewards system
- Architected Redux state management for complex user flows including point accumulation, session tracking, and real-time UI updates
- Integrated a voucher redemption system with the Urbox rewards platform, letting users exchange earned points for benefits from external merchants
- Partnered with backend engineers to integrate Zalo API endpoints for authentication and data sync

Technologies: *React.js, TypeScript, Redux, Zalo Mini App, Zalo API, Urbox*

Frontend Developer Intern, Nextway Technology – Ho Chi Minh City **Mar 2024 – Sept 2024**

- Developed a React Native app for pre-school parents to track daily activities, receive real-time school notifications, and message teachers directly
- Built a Next.js web portal with Zustand and Ant Design for school administrators to manage student records, class schedules, and announcements across departments
- Led UI implementation across web and mobile with TypeScript for consistent, type-safe, accessible interfaces aligned with client requirements

Technologies: *React Native, Next.js, TypeScript, Zustand, Ant Design*
